

► Introduction to the ergonomic version of ANDY PPE

The design concept is based on safety protection and comfortable wearing. Connected structure; The three piece hat design is more in line with the head; The rubber bands at the cap, waist, cuffs, and foot cuffs are tightened to better fit the human body;

The sleeves are designed with butterfly sleeves, making the shoulders more loose; The crotch is designed with triangular panels, which can provide a better wearing experience.

● Ergonomic design

The three piece hat, butterfly sleeves, triangular crotch and other designs are more in line with the natural shape of the human body during work.

● Excellent protective performance

The excellent pattern design of ANDY PPE can reduce the sewing area of clothes. The double-layer placket is paired with a double-layer zipper, and the sewing tape is tightly sealed to improve the resistance to particle and chemical liquid penetration and penetration.

● AD1100 Reinforced Type

AD2200TS

Sewing method for ANDY PPE protective clothing

Serged Seam

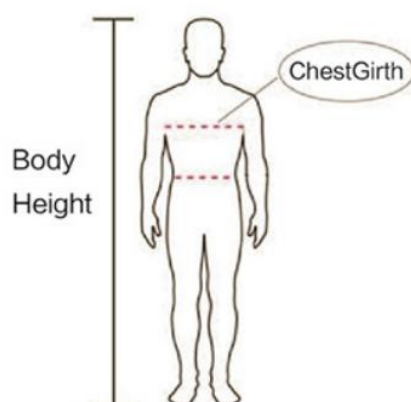

A serialized seam joins two pieces of material with a four stitch that intervals .This is an economic sticking method for general applications.

Bound Seam

This seam joins two pieces of material with an excess of similar material and is chain stitched through all the layers for a clean finished edge .This provides increased holdout of liquids and dry particles.

Heat Sealed with Tape Seam

A heat sealed seam is sewn and then sealed with a heat activated tape .This method provides liquid proof of seam, and is particularly useful for chemical protective clothing.

Garment Size	Body Height(cm)	Chest Girth(cm)
S	164-170	84-92
M	170-176	92-100
L	176-182	100-108
XL	182-188	108-116

XXXL	194-200	124-132

【 Product Description 】

The AD1010 product is made of high-performance spunbond polypropylene (PP) non-woven fabric, which is lightweight and has good breathability. It is used for dust protection and is suitable for applications in Class 5 of the European standard.

【 Product Features 】

Can provide excellent non-toxic dust protection; Economically affordable;

Excellent clothing pattern design, while balancing safety protection and wearing comfort.

[Product Description]

The fabric of the AD1100 product is a high-quality microporous membrane on the outer layer, and a spunbond polypropylene non-woven fabric (SF material) on the inner layer. It is lightweight, has good breathability, and is resistant to dust and liquid splashes, suitable for applications in Class 5 and 6 of the European standard.

[Product Features]

Can provide excellent liquid and dust protection;

Meet the EN1149-5 anti-static testing standard;

Micro porous breathable membranes help reduce the risk of heat stress and provide users with a better wearing experience;

Free of silicon and copper components, suitable for spray painting operations;

Excellent clothing pattern design, while balancing safety protection and wearing comfort.

【 Product Description 】

The AD1100TS product fabric is made of high-quality microporous membrane on the outer layer and spunbond polypropylene non-woven fabric (SF material) on the inner layer. The seam strips are reinforced, lightweight, and have good breathability, preventing dust and liquid splashes. It is suitable for applications in European standards 4, 5, and 6 categories.

【 Product Features 】

- Can provide excellent liquid and dust protection;
- Meet the EN1149-5 anti-static testing standard;
- Micro porous breathable membranes help reduce the risk of heat stress and provide users with a better wearing experience;
- Free of silicon and copper components, suitable for spray painting operations;
- The seam adopts internal sewing and external heat sealing technology, which increases the firmness and sealing of the seam, as well as the protective performance of the product;
- Excellent clothing pattern design, while balancing safety protection and wearing comfort.

【 Product Description 】

Made of non-woven fabric coated with high-density polyethylene (HDPE) on polypropylene, it can provide effective protection against various organic and inorganic chemicals, and is suitable for European standard Class 3 and Class 4 applications to provide effective protection against inorganic strong acid and strong alkali chemicals.

【 Product Features 】

High density polyethylene (HDPE) coated on polypropylene non-woven fabric can provide effective protection against common organic chemicals;
Tape tightly sewn edge seams to improve overall protection level and strength;
Double layer placket, double layer zipper, higher product tightness, further enhancing protective performance;
Enhanced design in the legs and elbows, suitable for more demanding work environments and complex work tasks;
Excellent clothing pattern design, while balancing safety protection and wearing comfort.

ADPVC products

Product name: Acid alkali protective clothing

Product model: ADPVC

Product features:

Lightweight PVC chemical protective clothing meets the requirements of type 3 and 4 protective clothing in the European standard, effectively protecting against the splashing and leakage of hazardous chemical protective liquids;

The product adopts a double-layer placket and double-layer zipper design, with a protective collar on the neck, which can be tightly combined with the protective mask;

The product can be reused multiple times.

Main applications:

The petrochemical industry;

Chemical container maintenance and cleaning operations;

Preparation and treatment of chemicals such as acid and alkali.

ADDPVC products

Product name: Acid alkali protective clothing

Product model: ADDPVC

Product features:

Made of double-sided PVC coated polyester fabric, the fabric is strong and sturdy;

Lightweight chemical protective clothing meets the requirements of the European standard for type 3 and 4 protective clothing, effectively protecting against the splashing and leakage of hazardous chemical protective liquids;

The product adopts a double-layer placket and double-layer zipper design, with a protective collar on the neck, which can be tightly combined with the protective mask;

The product can be reused multiple times.

Main applications:

The petrochemical industry;

Chemical container maintenance and cleaning operations;

Preparation and treatment of chemicals such as acid and alkali;

Environmental pollution treatment.

AD6000

Fully enclosed and airtight chemical protective clothing

【 Product features 】

Made of thickened chemical resistant fabric, durable and wear-resistant, the fabric is strong and sturdy;
Meet the requirements of Type 1 protective clothing according to the european standard;
New airtight zipper, with a buckle design on the fly, making it difficult for chemical liquids to penetrate;
Anti chemical boots are equipped with steel heads to prevent smashing and prevent secondary occupational injuries;
One piece acid and alkali resistant gloves provide one-step protection;
Double layer sealed splicing sewing provides better protection performance.

【 Main applications 】

The petrochemical industry;
Chemical container maintenance and cleaning operations;
Preparation and treatment of chemicals such as acid and alkali;
Protection against corrosive liquid splashes;
Protection against harmful dust particles.

ADFR-500

【 Product Description 】

A flame-retardant and breathable dustproof coverall. Provides protection against dust and low concentration chemical liquids splashing, has good flame retardant efficiency, and is suitable for European standard Class 5 and 6 applications.

【 Product Features 】

The production of flame retardant SMMS fabric can achieve a dual effect of flame retardancy and chemical penetration prevention;

Excellent clothing pattern design, while balancing safety protection and wearing comfort.

【 Product Standards 】

European standard: Type5; Type6; EN1073-2

【 Application Field 】

Secondary protection against harmless particles, aerosols, and mild liquid splashes; Welding, polishing, painting, installation of pipe fittings, etc. (in environments with high ignition risks caused by open flames or sparks); Petroleum/chemical refining; Shipyard; Drilling and mining.

Color: Blue

Size: S-3XL

Packaging specifications: 100 pieces/box

The product is provided in a non sterile form

Medical isolation shoe covers – A-1 type short leg shoe covers

Product name: Medical isolation shoe cover

Product model: A-1 type (short shoe cover)

Advantages and characteristics:

Made of non-woven fabric, it has sufficient strength and barrier performance. Non sterile, disposable.

Rubber band closure is used at the foot opening to better fit the legs and enhance protective performance.

The sole of the foot adopts anti slip design, which is anti slip and wear-resistant, making it more durable to wear.

Product application:

Medical personnel use it in medical institutions to prevent contact with potentially infectious patient blood, body fluids, secretions, etc., playing a barrier and protective role.

Medical isolation shoe covers – A-2 type long non slip shoe covers

Product name: Medical isolation shoe cover

Product model: A-2 type (long tube anti slip boot cover)

Advantages and characteristics:

Made of non-woven fabric, it has sufficient strength and barrier performance. Non sterile, disposable.

Rubber bands are used to close the ankles and ankles, providing a better fit with the legs and enhancing protective performance.

The sole of the foot adopts anti slip design, which is anti slip and wear-resistant, making it more durable to wear.

Product application:

Medical personnel use it in medical institutions to prevent contact with potentially infectious patient blood, body fluids, secretions, etc., playing a barrier and protective role.

Medical isolation shoe covers – A-2 type long tube lace up shoe covers

Product name: Medical isolation shoe cover

Product model: A-2 type (long tube lace up boot cover)

Advantages and characteristics:

Made of non-woven fabric, it has sufficient strength and barrier performance. Non sterile, disposable.

The ankle cuffs are closed with rubber bands, and the ankle straps are tightened for a better fit with the legs, making it more durable to wear.

The product seam is sealed with adhesive strips to enhance protective performance.

Product application:

Medical personnel use it in medical institutions to prevent contact with potentially infectious patient blood, body fluids, secretions, etc., playing a barrier and protective role.

Medical isolation shoe cover – A-2 type long tube rubber clause shoe cover

Product name: Medical isolation shoe cover

Product model: A-2 type (long tube rubber clause boot cover)

Advantages and characteristics:

Made of non-woven fabric, it has sufficient strength and barrier performance. Non sterile, disposable.

The ankle and ankle are closed with double rubber bands to better fit the legs and prevent detachment.

The product seam is sealed with adhesive strips to enhance protective performance.

Product application:

Medical personnel use it in medical institutions to prevent contact with potentially infectious patient blood, body fluids, secretions, etc., playing a barrier and protective role.

Medical isolation shoe covers – A-2 type long tube rubber clause anti slip shoe covers

Product name: Medical isolation shoe cover

Product model: A-2 type (long tube rubber clause anti slip boot cover)

Advantages and characteristics:

Made of non-woven fabric, it has sufficient strength and barrier performance. Non sterile, disposable.

Rubber bands are used to close the ankles and ankles, providing a better fit to the legs and preventing them from falling off.

The sole of the foot adopts anti slip design, which is anti slip and wear-resistant, making it more durable to wear.

The product seam is sealed with adhesive strips to enhance protective performance.

Product application:

Medical personnel use it in medical institutions to prevent contact with potentially infectious patient blood, body fluids, secretions, etc., playing a barrier and protective role.

For workers in GMP controlled environments
Provide a solution for disposable clean protective products

CRC series clean protective products

The CRC series of protective products includes disposable clean protective clothing, disposable clean boot covers, and disposable clean headsets, disposable clean sleeves.

[\[Product features\]](#)

- A. The product is produced in a clean and silicon-free environment;
- B. Disposable clean protective clothing is in a one-piece style, with a closed fly and zipper. The rubber bands at the cap, cuffs, and feet are tightened, and the cuffs are designed with thumb rings;
- C. The product is suitable for clean environments, easy to put on and take off, and avoids pollution caused by the dressing process;
- D. Anti static, the fabric meets anti-static requirements, reducing the risk of particle aggregation and pollution
- E. The product is made of microporous breathable film non-woven fabric, which can provide excellent liquid and particle protection, making it comfortable and breathable to wear;
- F. The product does not contain latex or silicone;
- G. The product has low fiber loss, and it is recommended to use ISO 7/8 level clean rooms and GMP C/D level controlled environment requirements;
- H. The product is provided in both sterile and non sterile forms, with a sterilization guarantee value of 10^{-6} SAL for sterile products;

[\[Main applications\]](#)

- A. ISO 7/8 level cleanrooms and GMP C/D level controlled environments
- B. Pharmaceutical manufacturing industry
- C. Control the environment
- D. Biotechnology and Life Sciences

Product name:
